ASSIGNMENT-2

ASSIGNMENT **: Build Python code, Generate Temperature and Humidity values (Use Random function to generate values) and write a condition to detect an alarm in case of high temperature and high Humidity**

NAME:R.VIGNESH BABU

PROGARM

```
#1 import

try:

   import configparser

except:

   from six.moves import configparser

import smtplib

from email.mime.multipart import MIMEMultipart

from email.mime.text import MIMEText

import requests

#2 variable related to weather API

weather_dict = {'freezing_rain_heavy': 'Heavy rain and snow', 'freezing_rain': 'Rain and snow',
